Breast awareness is important for women of all ages, even if you're having regular mammograms. Breast changes to look out for include:

- A new lump or lumpiness, especially if it's only in one breast
- A change in the size or shape of the breast
- A change to the nipple, such as crusting, ulcer, redness or inversion
- A nipple discharge that occurs without squeezing
- A change in the skin of the breast such as redness or dimpling
- An unusual pain that doesn't go away

It's important to see a Doctor without delay if you find any breast change that is unusual for you.
